Allowable Subject Matter

2. Claims 1, 6-9, 11-16, 23-30 are allowed.
3. The following is an examiner's statement of reasons for allowance

Claims 1, 23 and 27

The closest prior art of Hutchinson et al. teaches an eye gaze tracking device. The primary purpose of Hutchinson is to allow users to select functions within an interface and provide command control through the gaze dwell times to provide complete control of the computer, without mouse input. Hutchinson monitors eye gaze movement by tracking the user's eye movement with mirrors and a camera. Hutchinson teaches a pre-determined dwell time to provide users access to simulated mouse actions. Hutchinson also teaches measuring the angle between the users gaze and the monitor to determine the users gaze point and the point to which they want to move the cursor to (See column 11). However, Hutchinson does teach expanding a gazed upon item but does not provide or suggest for selectively expanding a region surrounding a target to compensate for the expanded gazed item. Hutchinson's dwell time is not seen as teaching monitoring for renewed user activity to restore the object to its unmodified size and also calculating the delay time by determining the trajectory between the new gaze point and old point and determining 90% of the time it would take to move the cursor to the new point and using the calculated time as the delay to wait to expand a target output, as recited in the amended claims. Tognazzini and Amir also teaches an eye gaze trackers. Tognazzini teaches expanding areas area around the target. Tognazzini is not seen as teaching monitoring for renewed user activity

Art Unit: 2179

to restore the object to its unmodified size and also calculating the delay time by determining the trajectory between the new gaze point and old point and determining 90% of the time it would take to move the cursor to the new point and using the calculated time as the delay to wait to expand a target output, as recited in the amended claims. Amir teaches the eye gaze tracker computes the trajectory to a target object by first detecting a manual movement in the direction of the object along with the gaze. Amir is not seen as teaching monitoring for renewed user activity to restore the object to its unmodified size and also calculating the delay time by determining the trajectory between the new gaze point and old point and determining 90% of the time it would take to move the cursor to the new point and using the calculated time as the delay to wait to expand a target output, as recited in the amended claims.

Therefore, the prior art of Amir, Hutchinson, and Tognazzini are not seen as teaching the features of the claim, as whole, therefore the claims are allowed over the prior art.

Claims 6-9, 11-16, 24-26, 28-30

These claims are dependent upon Claims 1 23, and 27, and are thus allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
